Description

This text has been translated automatically.

This playful Maaskruiser has an awful lot to offer. Thanks to the dual steering, she can be operated both inside and outside. In addition, the boat is fitted with both a bow thruster and a stern thruster: no propeller, but a jet-driven thruster. Both jets are also equipped with remote control, so they can easily be operated from the outside helm as well. On board, the boat is fitted with a range of conveniences, including heating. In the engine compartment sits a reliable Mercedes OM616, a 4-cylinder diesel engine delivering 65 hp.
